VIRAL PROTEIN FOUND IN THE DRINKING WATER OF “ASTRA VILLA” AND “GENERAL TOWN” APARTMENTS

According to earlier complaints by the residents of Astra Villa and General Town apartments, Specialized Inspection Agency has taken samples from their water and tested. The test result showed that the level of virus infection is above the standard and found viral protein. Therefore, Special Inspection Agency and USUG have been taking necessary measures to provide drinking water to the residents twice a day and clean and sanitize the wells.

SPECIAL INSPECTION AGENCY ORGANIZES THOROUGH INSPECTION DUE TO COVID-19 SPREAD

Tactical Headquarters of SIA monitors the readiness of state emergency facilities, the safety of drinking water, the operation of domestic and pre-treatment facilities, and the level of their cleanliness. Within the framework of this work, samples were taken from the sewage inlet and outlet of the Central Wastewater Treatment Plant and the National Center for Infectious Diseases and tested for coronavirus (COVID-19) in the Laboratory of Chemistry, Bacteriology and Polio.

The recycled wastewater thrown into the environment meets the requirements of MNS 4943: 2015 standard. Chlorination is being carried out at different locations of the Central Wastewater Treatment Plant.
