

Supply of Smart Water Meters and Transmission Panel

Reference Number: MCA-M/PROC/129(a)

QUESTIONS AND ANSWERS Clarification #1

Date: January 19, 2026

No	QUESTION	ANSWER
1	<p>In the technical specification, Item.10 “<i>Connector cable - minimum 20m coil and signal cable</i>”.</p> <p>Please confirm whether this cable refers to the connection cable between the water meter display and the data transmission panel?</p>	<p>The purpose of the 20-meter cable is to connect the water meter to the transmission panel for data transmission. Since the water meter is installed directly on the pipeline, it cannot be relocated. The data transmission panel must be installed in a location away from water and moisture, where signal transmission is optimal;</p> <p>As such, it is confirmed that this refers to the connection cable between the water meter display and the data transmission panel; and should be supplied with each meter as per the Item.10 of the Specification.</p>
